

## NEW PRODUCT RELEASE

# HIFLO PERFORMANCE AIR FILTERS

The easiest way to improve your vehicles performance is to replace your original filter with a Hiflo high performance filter. This can increase airflow 5-30%, typically resulting in 3-5 Kw extra along with sharpened throttle response. Many owners also report improved fuel economy. Hiflo's air filters have a sealing detail that provides a lifelong service without requiring sealing grease. They are washable and reusable and guaranteed for as long as the original purchaser owns the vehicle.

Hiflo's range of performance air filters for diesel engines use patented Pro-Guard 7 media. Pro-Guard 7 air filter media is constructed using 5 layers of progressively finer medical grade cotton gauze, combined with 2 layers of non-woven synthetic polyester fabric with random porosity. The result is high performance air flow with the filtration efficiency of a heavy duty filter.

### Features:

- Washable/Reusable cotton synthetic media will not collapse even when wet.
- Built in expanded metal prevents collapse under high boost pressure.
- Pliable progressive seals protect against dirt bypass without the need for sealing grease or supplement seals.
- 100% polyurethane construction withstands extreme engine temperatures and extends service life.
- Tall open pleats for maximum air flow and extended service intervals.
